

## **Water Supply Reliability Analysis and Self-Certified Conservation Standard North Marin Water District (361)**

### **Purpose**

This analysis and accompanying data provides documentation supporting the North Marin Water District's (NMWD) self-certified conservation standard pursuant to the May 18, 2016 Drought Emergency Water Conservation regulation adopted by the State Water Resources Control Board.

### **Water Supply**

NMWD's water supply sources include Russian River surface water, local surface water from Novato Creek (Stafford Lake), and recycled water. The majority of the NMWD's potable water supply is surface water from the Russian River (roughly 80 percent) with the remainder from Stafford Lake. Tertiary treated recycled water, although an important supply source used to offset the use of potable water, was not included in this analysis.

### **Supply Reliability Analysis**

Worksheets detailing Demand, Supply, Conservation Standard, and other supporting data, were provided to NMWD by the Sonoma County Water Agency to fulfill the requirements of the May 2016 Emergency Regulation and supplemented by NMWD on the 'Local Supply' worksheet tab. The regulation stipulates that water wholesalers are to provide their retail customers with information on the volume of water they can expect to deliver in each of the next three years using the assumptions in the regulation. The analysis is provided on the worksheets to demonstrate a conservation standard of zero percent for NMWD. The pertinent information for NMWD is highlighted in yellow. The Water Agency and NMWD have estimated the projected water storage available from Lake Sonoma and Stafford Lake for water years 2017, 2018, and 2019 by assuming hydrologic and demand conditions for water years 2013, 2014, and 2015 repeat. A narrative description of the conservative methodology used by the Water Agency for this analysis is available online at:

<http://www.scwa.ca.gov/files/docs/water-supply/Self%20Certification%20Wholesaler%20FINAL.pdf>

Information about NMWD's Water Supply Reliability Analysis and Self-Certified Conservation Standard has been posted to the NMWD's website at the following link:

<http://www.nmwd.com/Self-Certification.php>

Current Water Year	2015-2016	1,756	Not Yet Known	Stafford Lake Spilled Mar 9, 2016

**North Marin Water District Local Supply Used for Self Certification Reliability Analysis**

	Reference Year	Local Production AF/YR
Water Year 1 (2017)*	2012-2013	2,420
Water Year 2 (2018)*	2013-2014	1,265
Water Year 3 (2019)*	2014-2015	1,928

\*Stafford Lake is collects rainfall runoff each water year from an 8.3 square mile water shed at the upper reach of Novato Creek in Marin County California.

The Lake has a capacity of 4,450 AF.

North Marin Water District assumes Stafford Lake water supply in Water Year 1 ( WY 2017), Water Year 2 (WY 2018), and Water Year 3 (WY 2018) will equal available local water supply in reference Water Years 2012-2013, 2013-2014, and 2014-2015, and local water production will also equal the reference years as shown on this worksheet 'Supply' tab.
